

The NaijaSlangs Blueprint

A Linguistic Infrastructure Roadmap for Nigerian Digital Culture

VERSION 2.0 // OPEN SOURCE STRATEGY

The Challenge & Vision

Addressing the digital gap in Nigerian linguistics

01. Fragmentation

Nigerian slang is currently scattered and undocumented in machine-readable formats.

02. AI Bias

Global NLP models fail to capture the nuances of pidgin and street lingo accurately.

03. Cultural Preservation

As culture evolves rapidly, a centralized open-source repository is vital for preservation.

04. Developer UX

Building apps with local context requires structured, reliable API access to terminology.

Our North Star

To become the definitive linguistic infrastructure for Africa's most populous nation, empowering developers and researchers with high-quality, community-vetted slang data.

Strategic Data Sourcing

Tiered approach to building a world-class dataset

- **Tier 1: Social Scraped**

Real-time extraction from X/Twitter and social trends using advanced NLP tags

- **Tier 2: Community Vetted**

Direct submissions through our contributor portal, reviewed by language

- **Tier 3: Academic/Open**

Integration with Masakhane and Wiktionary dumps for historical and structural depth.

The Technology Stack

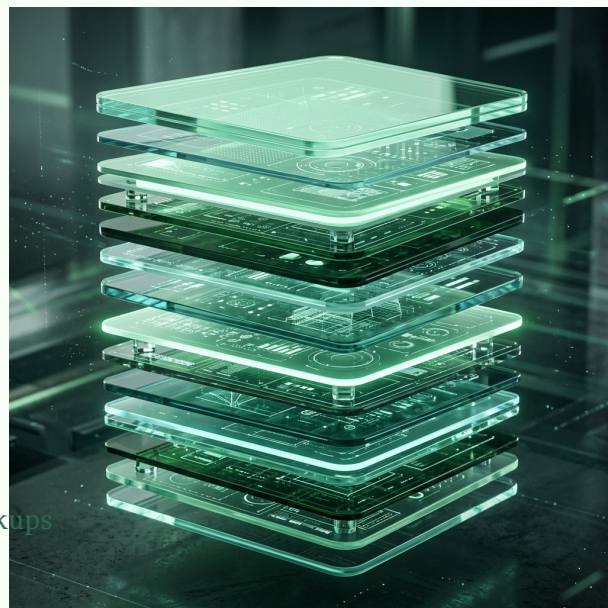

Built for performance, scalability, and developer experience

[CORE BACKEND] FastAPI, Pydantic, Python 3.12

[PERSISTENCE] PostgreSQL (Relational), Redis (Caching)

[SEARCH ENGINE] Elasticsearch for fuzzy, high-speed slang lookups

[DEPLOYMENT] Docker, GitHub Actions, Kubernetes on Render

The Build Roadmap

A four-phase execution plan for 2025

Phase 1: Alpha

Core API development and initial 1,000 word seeding.

Phase 2: Beta

Contributor portal launch and search optimization.

Phase 3: Public V1

Public launch with SDKs for JS/Python/Flutter.

Phase 4: Expansion

GraphQL support and NLP researcher data exports.

Community & Impact

Empowering contributors and scaling culture

- Contributor Leaderboards to gamify data entry.
- Annual "State of Slang" report for linguistic researchers.
- Hackathons focused on building apps with local context.
- Partnering with Nigerian universities for student-led data vetting.

Let's build the infrastructure of Nigerian Culture.

The Blueprint is ready. Execution begins now.
